

# FOR DIRT, DUST AND DEBRIS, THIS IS THE END OF THE LINE.

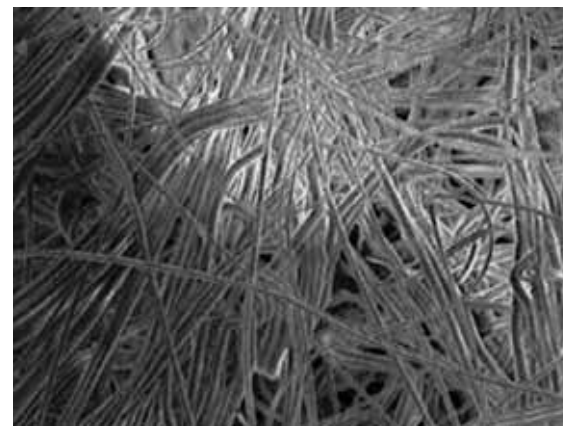

## A better design. A longer life.

New Holland engine oil filters have a two-stage filter design that gets rid of contaminants that many competitive “will-fit” filters miss. This combination filter design removes the smaller-sized particles that can cause the most damage in today’s high-performance engines.

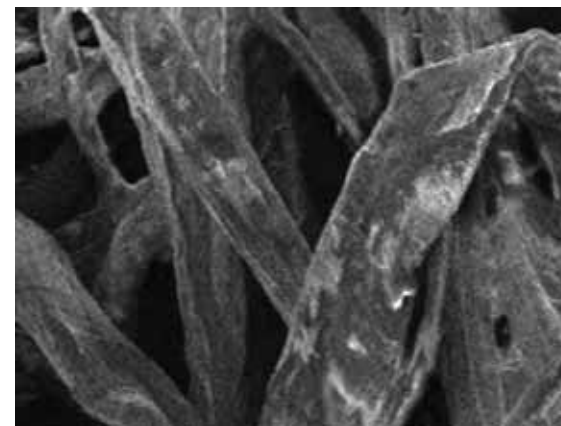

New Holland filters—engineered for superior performance.

## New Holland synthetic media

Using synthetic, multi-layer, gradient density media, New Holland filters outperform the average-performing cellulose and paper media of “will-fit” filters. Providing maximum durability and dirt-holding capacity, New Holland filters work better under any conditions.

New Holland  
synthetic media

“Will-fit” filters  
(cellulose/paper)

Secondary media removes  
what “will-fits” can’t.

Primary media provides  
high-efficiency filtration.
